

AppRemover™

Security Application Removal Tool

AppRemover is a software utility developed by OPSWAT, Inc. that enables the complete, silent uninstallation of security applications from your computer.

When Should I use AppRemover?

- When replacing one security application with another
- When a previous uninstallation has failed
- When you have forgotten or cannot access the application password

Easily uninstall hundreds of applications

AppRemover is updated monthly. As such the list of supported applications is constantly growing.

For the most up-to-date list check: www.appremover.com

Supported applications types include:

- Security Suites
- Antiphishing
- Antispyware
- Antivirus
- Personal Firewalls
- Hard Disk Encryption

Benefits

- Completely uninstalls all files, registry keys and services
- Tested by hundreds of thousands of users
- Regularly updated and fully supported
- Uninstalls silently in a managed environment without the need for a client/server connection
- Able to complete interrupted or incomplete uninstallation procedures
- Uninstallation process is automated, no need for user intervention
- Fully brandable
- Lightweight and fast
- No installation required

Supported operating systems

Windows 2000, 2003, 2008, XP (32/64 bit), Vista (32/64 bit), 7 (32/64 bit)

```
using namespace AppRemover;

int main(int argc, char ** argv)
{
    //detect the currently installed products
    CAppRemover appRemover;
    vector<ProductInfo> foundProducts = appRemover.Detect(DetectionM

    if (foundProducts.size() == 0) {
        //failed to detect anything in normal mode - try heuristic d
        foundProducts = appRemover.Detect(DetectionMode::heuristic);
    }

    if (foundProducts.size() == 0) {
        //failed to detect anything in normal mode - try heuristic d
        foundProducts = appRemover.Detect(DetectionMode::partial);
    }
}
```

C++ Interface

```
C:\AppRemover>AppRemover.exe -h
Usage: AppRemover [-h] [-i [SupportedProductsUal]] [-l LogLevelUal] [-p LogPathUal] [-s ProductIDMode] [-x ExclusionsFileFullPathUal]

Options:
-h      Display usage help
-i      Display supported products list
        SupportedProductsUal = 1-Only supported products installed on the machine,
        2-All supported products,
        3-Remains detection,
        4-Heuristic detection
        optional argument (default='1')
-l      Log level
        LogLevelUal = 0 is the least detailed log
-p      Log path
        LogPathUal
-s      Product ID or GUID
        ProductID or GUID = Delete specific product(given by its ID or GUID)
-u      Uninstall product\
        UninstallMode
        optional argument (default='3')
-x      Exclusion list File's full Path
        ExclusionsFileFullPathUal

Command Line Interface

Brandable GUI

How It Works

AppRemover's libraries are based on the proven technology of OPSWAT's OESIS Framework. The framework's widespread deployment includes more than 50 million computers worldwide. AppRemover combines this technology with data gathered from OPSWAT labs and an active community of hundreds of thousands of users.

Three Common Uses for the SDK

Software Vendors

AppRemover assures users that applications are fully removed. This makes it ideal for software vendors looking to add functionality to their security application which scans and removes previous versions of their own software or a competitor's software. This functionality can either be integrated into the vendor's own install process, or as a standalone application.

IT Managers

If an organization is looking to migrate their entire user base from one security application to another, an IT manager can use AppRemover to write a script which will utilize the AppRemover CLI and silently remove the unwanted application.

Developers

Fully brandable, GUI rich applications based on the free (for personal use) version of the product are available for customizing.

Multiple Interfaces Available

- C++/COM
- AppRemover CLI
- Brandable, feature rich GUI
