

OESIS® Framework Customer Snapshot

eEye Digital Security

About Customer

Since 1998, eEye Digital Security has made vulnerability management simpler and more effective by providing the only unified vulnerability and compliance management solution that integrates security risk discovery, prioritization, remediation, and reporting into a complete offering. Consistently the first to uncover critical vulnerabilities and prevent their exploit, eEye leverages its world-renowned research and development to strategically secure customer assets. Thousands of mid-to-large size organizations, including some of the most complex IT environments in the world, rely on eEye solutions to protect against the latest known, unknown, and zero-day vulnerabilities.

About Retina CS

Retina CS is the only unified vulnerability and compliance management solution that integrates security risk discovery, prioritization, remediation, and reporting. With Retina CS, organizations close the gaps across the vulnerability management lifecycle to reduce risk for the organization.

Customer Challenges

With cyber-threats becoming more common and increasingly more advanced, understanding and protecting against them becomes extremely difficult. eEye's mission was to expand the understanding of incoming threats by gaining visibility to malware data from third-party antivirus products.

OPSWAT's Solution

eEye integrated OPSWAT's OESIS Framework to enable Retina CS to identify malware detected by third-party antivirus applications. Running as a Windows service on the host, the Retina Protection Agent uses direct calls to OESIS to retrieve logs of malware detections from supported third-party antivirus applications. These logs are packaged alongside other threat data (attacks and vulnerabilities) and sent to the Retina CS management console to provide a centralized view of the overall threat landscape.

Results

Retina CS is able to report on malware logged by third-party antivirus products, which augments existing data to provide a more complete view of the overall threat surface. Customers are able to view threat reports by asset to prioritize vulnerabilities and reduce overall risk.

For more information please contact sales@opswat.com.

"It's increasingly difficult for enterprises to protect themselves against sophisticated threats. We enhanced our technology with components from OPSWAT's OESIS Framework to expand our overall threat intelligence. Retina CS is now able correlate data from multiple sources in order to prioritize remediation efforts and reduce risk."
