

MetaDefender® Kiosk Product Comparison Guide

Trust at the point of entry

MetaDefender Kiosk is a digital security guard—inspecting all media for malware, vulnerabilities, and sensitive data. Three models allow you to flexibly enforce media policies, based on the specific needs of your environment.

K1000

Lowest cost at scale

K1000 is well-suited for attended environments, such as IT labs or at reception. The low price point aids deploying the K1000 at scale—for consistent enforcement across geographies.

K2000

Nimble & flexible

K2000 has the smallest footprint, and the removable stand makes it an excellent self-check-in concierge for professionals. Mounted on the wall, the slim profile is highly functional onboard a ship or in a data center clean room.

K3000

Ruggedized for industry

Supports 20+ media types

With unmatched durability and power, the K3000 has proven ideal for protecting critical infrastructure. Support for multiple media types, even for legacy systems, simplifies regulation compliance and policy enforcement.

Kiosk model K3000 (depicted) available only in the U.S.

Metadefender Kiosk Secure Image

A key differentiator of OPSWAT MetaDefender Kiosk is its secure image. This feature ensures that the operating system cannot be modified or tampered with during operation. Upon installation, a baseline is created and is continuously monitored to detect any changes. If any unexpected changes occur, Kiosk functionality is halted until the alert is remediated.

- *The MetaDefender Kiosk Secure Image follows best practices from the Security Technical Implementation Guide (STIG), by the Defense Information Systems Agency (DISA).*
- *Metadefender Kiosk Secure Image is available only with the K3000, K2000 and K1000 models.*
